Rotary Vane Compressors and Vacuum Pumps
For over 90 years, Gast Manufacturing has been providing innovative air solutions to a broad breadth of customers. With the relatively recent addition of JUN-AIR, we have expanded our capabilities and formed, “The Gast Group.” Together, our diverse engineering background and pneumatic experience allow us to provide both component and system solutions to meet all of your pneumatic needs. And, all backed by our strong commitment to quality and customer support.

Products for Almost Any Application – Worldwide

We offer an extensive and versatile line of air-moving products, including vacuum pumps, compressors, air motors, gearmotors, vacuum generators, and regenerative blowers. We design and build these components for original equipment manufacturers worldwide, but we also develop complete pneumatic solutions to solve tough customer challenges.

To ensure fast, efficient delivery of products, Gast has a vast network of sales representatives/distributors throughout the United States and the world. Plus, we maintain direct sales and service facilities in Europe, Hong Kong, and Shanghai, China.

Unparalleled Design Expertise

Unlike other manufacturers, who might expect you to modify your pneumatic system to fit their available product(s), Gast is committed to finding the right product to meet your specific needs. If we don’t have a high-quality, off-the-shelf product to fit your existing application or meet your anticipated needs, we’ll propose customized cost-effective design options that will serve your special requirements. We can even develop and produce your complete pneumatic system for you.

Our experienced Research and Development engineers and Product engineers work together to analyze customer needs and use computer-aided design to generate timely solutions for air-handling problems. The design team has one goal: to create problem-solving solutions that capitalize on the latest available technology, meet all application requirements, and benefit from cost-effective production methods. The end result: products and solutions that are the best value in the marketplace for our customers.

A Lasting Commitment to Quality

We invest heavily in both equipment and people to maintain the consistent quality for which our products are known worldwide, and we have done so since day one. As early as 1983, we implemented a total quality process designed to ensure the quality of our products. In keeping with that tradition, Gast has achieved ISO 9001 certification, making us a member of the elite group of manufacturing companies in the world to receive that certification.

European Community Directives

With extensive sales outside the United States, Gast has pledged to conform to the European Community Directives. These directives contain essential requirements concerning health, safety, environment, and consumer protection for all products targeted for the European Community market. Currently, all Gast products available for sale in the European Community are in compliance with the Machinery, Low Voltage, and Electromagnetic Compatibility Directives.
Why use a **Rotary Vane Pump?**

Rotary Vane vacuum pumps and compressors have certain significant advantages. In addition to providing smooth, pulse-free air flow without receiver tanks, they are compact (or equivalently offer high flow capacities for a given size), are simple and economical to install and operate, have low starting and running torque requirements, produce minimal noise or vibrations, are capable of long, service-free life, and are easily serviced.

If these features are what you need in your pneumatic application, a Gast Rotary Vane model can provide you the right solution.

**Reliable**
The moving parts consist of an actuating rod supported by two special synthetic rubber diaphragms. They oscillate laterally, permitting a minimum of 30,000 hours of continuous operation on many models. Other than the occasional filter cleaning, operation is virtually maintenance-free. Replacement parts come in a cassette.

**Energy Efficient**
Operation is based upon the principles of electromagnetic oscillation. It eliminates the need for sliding parts, minimizing power consumption.

**Clean Air**
Because there are no sliding parts there is no need for lubrication. An added advantage: the exhausted air is always clean and particle-free.

**Quiet**
Sound insulation was a prime consideration in the design of the pneumatic circuit and mechanical section. The result: a surprisingly low operating noise level – as low as 38 dB(a).

**Smooth Flow**
Uniform exhaust rate and minimal pulsation make the Linear products ideal for applications requiring consistent air pressure and supply.

---

**How Does a Rotary Vane Pump Work?**

Pumping action is produced by a series of sliding, flat vanes as they rotate in a cylindrical housing. As the diagram shows, an eccentrically mounted rotor turns and the individual vanes slide in and out of their slots by centrifugal and pressure-loading forces. This creates a series of air compartments of unequal volume against the wall of the housing. These compartments get larger during the suction part of the cycle, creating vacuum at the intake port and smaller during the discharge portion of the cycle, creating pressure at the exhaust port.

The vacuum and pressure flows are free of pulsation because the inlet and exhaust ports do not have valves, and the air is moved continuously rather than intermittently.

---

**Gast Rotary Vane and Vacuum Pumps Performance***

*Shown here are performance ranges of our positive displacement models. Performance shown on inside charts is for continuous operation. Higher performance is possible on an intermittent basis (10 min. on/10 min. off) for some of the models listed. Please consult our Factory.*
### Rotary Vane Performance Overview

The units that we list in this catalog are a small portion of what we actually make. Those listed are considered “standard units” and are normally available from stock in small quantities. Variations are produced for many customers and by passing on to us the application specifications we might find an existing unit that fits your requirement. If we don’t and the quantity is sufficient, we will design a “special unit” for the application.

Pictorial and dimensional data is subject to change without notice.

The information presented in this catalog is based on technical data and test results of nominal units. It is believed to be accurate and is offered as an aid in the selection of Gast products. It is the user’s responsibility to determine suitability of the product for intended use and the user assumes all risk and liability whatsoever in connection therewith.

### Catalog Performance Specifications

The specifications listed are that of a unit at sea level with an ambient temperature of 70°F (21°C), operating with normal electrical current conditions. The figures stated in this catalog are nominal approximations for models without accessories. Intake filters and exhaust mufflers, and the accumulation of contaminants in them during operation, will decrease the flow of air as well as the achievable pressure.

*Standard model performance. Soil sparging model capable of 20 psi.

**Soil sparging model.

## Typical Applications

### Environmental Applications
- Air sampling
- Breathing air supply
- Sewage aeration
- Soil sparging

### Medical Applications
- Dental surgical suction
- Dental vacuum mixers
- Medical aspiration
- Circulation therapy

### Graphic Arts Applications
- Envelope openers
- Collating inserters
- Vacuum frames

### Other Applications
- Pond aeration
- Vacuum hold-down
- Vacuum forming
- Air bearings
- Oil atomization
- Food processing
- Laboratory vacuum
- Milking equipment
Unit Life Expectancy
Many variables determine the life expectancy of a unit. Among them are:
1. Ambient temperature
   Gast’s units operate best within a temperature range of 32 °F (0 °C) to 100 °F (38 °C). Lower temperatures affect a unit’s ability to start and higher temperatures affect its life. Contact the factory for authorization of unusual ambient conditions.
2. Duty level
3. Operating cycle
4. Operating speed
5. Condition of air handled
   • Cleanliness
   • Humidity
   • Heat
   • Chemical vapors present (corrosive, noncorrosive)
6. Unit maintenance
   • Lubrication (if required)
   • Filter maintenance
   • Muffler maintenance

Electric Motors
All electric motors supplied with Gast vacuum pumps are designed to operate at plus or minus 10% of nameplate voltage. Motors to meet special requirements are available upon request. Various brand-name motors are furnished on any model at the discretion of Gast.

Starting Under Load
Rotary vane units will start under load. The vanes permit the internal chamber of the unit to bleed off during the cycle. At start-up, the pump is not subjected to full load until enough centrifugal force has been attained to throw the vanes out against the body. By that time, the motor has gained enough momentum to continue its cycle without stress.

Continuous vs. Intermittent Operation
Continuous vs. intermittent duty usually must be considered. Our definition of intermittent duty is 10 minutes or less on and 10 minutes or more off. Please note that when you refer to performance curves in this catalog, the solid line indicates continuous operation, while the dashed line shows intermittent duty.

European Community’s Machinery Directive
Given its international perspective, Gast has also pledged to conform to the European Community’s Machinery Directive, a safety certification program for all products targeted for marketing in the European Community. Currently, all Gast products sold in the European Community are in compliance and include a Declaration Certificate.

Product Features
• Lubricated operation
• Rugged construction/low maintenance
• Essentially pulse-free service

Includes
• Oil
• Muffler V525
• Filter V500D
• Cooling fan B340C
• Coupling assembly AE541A (0465), AE541C (0765)

Recommended Accessories
• Base AB325
• Vacuum relief valve AA840A
• Vacuum gauge AA640
• Coupling guard AE873
• Oil AD220
• Repair kit K234 (0465), K235 (0765)

Separate Drive Rotary Vane
Oilless 1550 Series

Model 1550 Series
20 inHg max. vacuum
14.5 CFM open flow
15 psi max. pressure

Product Features
- Oilless operation
- Pulley driven (multiple speeds possible)
- Rugged construction/low maintenance
- Essentially pulse-free service

Includes (On Standard Models)
- Filter AB600F (Vacuum pump)/AC433 (Compressor)
- Muffler AB600J (Vacuum pump)
- Cooling fan AC326C
- 5" P.D. pulley AB140

Recommended Accessories
- Base AB897A (Vacuum pump)/AB889A (Compressor)
- Belt guard AB332B (Vacuum pump)
- Belt guard AB334B (Compressor)
- Vacuum relief valve AA840A
- Pressure relief valve AA600

Model 4080 Dual Function
Ideal for graphic arts applications where simultaneous vacuum and pressure are needed.
9 psi max. pressure (@ 18 inHg)
25 CFM open flow (pressure side)

Product Features
• Oilless operation
• Rugged construction/low maintenance
• Low noise

Includes
• Internal sound suppression
• Heavy duty internal filtration
• Vacuum adjustable relief valve *AN226, metric version AN226A (Vacuum pump, dual function)
• Pressure adjustable relief valve *AN225, metric version AN225A (Compressor, dual function)
• Vacuum gauge *AA640 (Vacuum pump, dual function)
• Pressure gauge *AA644B (Compressor, dual function)
* Not included in separate drive models

Recommended Accessories
• Filter/muffler kits:
  K552 (Compressor or vacuum pump)
  K547 (Dual function models)
• Complete repair kits:
  K546 (Compressor or vacuum pump)
  K551 (Dual function models)

Lubricated or Oilless 3040 Series

Model 3040 Series
20 inHg max. vacuum
10 psi max. pressure
31 CFM open flow (oilless)
40 CFM open flow (lubricated)

Features
- Lubricated or oilless operation
- Pulley driven (multiple speeds available)
- Rugged construction/low maintenance
- Essentially pulse-free service

Includes
- Filter AA900D (Oilless) AB650C (Lubricated) – Vacuum pumps
- Filter AD750 – Compressors
- Muffler AA900F (Oilless) AA900E (Lubricated) – Vacuum pumps
- Oil reservoir AA960A-1
- Vacuum-actuated lubricator V40C (Lubricated)
- Pressure lubricator AD730
- 6.5" P.D. pulley AC374B
- Fan AD236 – Vacuum pumps and oilless compressor

Recommended Accessories
- Base AB898A – Vacuum pumps
- Base AB898B – Compressors
- Belt guard AB331A
- Vacuum relief valve AA308
- Pressure relief valve AA307
- Vacuum gauge AA640
- Pressure gauge AA644B
- Oil AD220 (Lubricated)
- Check valve AH326A – Vacuum pumps

Special Purpose Units – Compressors for Soil Sparging
Oilless 0823, 2080/3080, 2067/2567, 6066, and 1290 Series

Units are supplied with special, high capacity filtration plus motors that allow up to 30% more pressure than the standard model counterpart.

**Product Features**
- Oilless operation
- Rugged construction/low maintenance
- Heavy-duty filters

**Model 0823**
- 10 psi max. continuous pressure
- 8 CFM open flow

**Models 2080/3080**
- 15 psi max. pressure
- 25-35 CFM open flow

**Models 2067/2567**
- 20 psi max. pressure
- 17-21 CFM open flow

**Models 6066**
- 20 psi max. pressure
- 37-55 CFM open flow

**Model 1290**
- 20 psi max. pressure
- 112 CFM open flow
